ABSTRACT

The problem on Samoedra Accu Store is there still not any registry system for every mutation goods transactions yet. Because of that on this skripsi will build aplication of goods mutation based web - based, in such a way that information about goods mutation will ascertainable more clearly and specificaly. This aplication of goods mutation will apply using web-based online system, which make it possible to get acces by internet. Development system method on this aplication using Waterfall method and build using programming language PHP, database mySQL, which of these will produce an aplication that could knowing about data information of goods mutation, other than that also to get knowing information of stock list, purchase transaction, sale transaction, and user also can interact with this aplication based by the information needed through the available menu.

This aplication has not using record system goods record system, which mean needs more development system to become more effective system.

Key word : **PHP, MySql, Goods Mutation, Samoedra Accu Store**
