ABSTRACT

Advances in technology now more rapid development. Almost every educational and government agencies use computer technology to simplify and speed up the completion of the work as well as use of the Internet as a means of speeding up the delivery of information to interested parties.

One example is the presence of a web-based information system is supporting the progress of the exchange of information, because it can be used by anyone, anywhere, without limits of space and time. All humans need information, not excluding educational institutions ranging from elementary, junior high, high school and university high.Although role of information technology so big but its utility in some educational institutions is not maximized.

Academic Information Systems at the Junior High School 1 Karangmojo Based Web is a system that provides information student activity reports online form value statements and information of students, thereby helping speed and quality in the delivery of information. In addition to the web-based data information can be accessed anytime.

The results of this system is a data processing value using the curriculum in 2013 to convert the value of knowledge automatically after values associated in the insert.
