

ABSTRACT

Business development company as well as the level of business competition car rental services make employers improve the performance of transport services for consumers. The businessman got full confidence in managing the data into information. The trust must be actualized in the form of programming that run fast, precise, accurate, effective and efficient.

The system has been created using PHP programming language and created a computer system that is capable of a software (software) to process data into information. In carrying out the activities of a lease, required an information system to accommodate the needs of existing data management. The system returns the car rental information and web-based able to facilitate everything and resolve issues related to data processing and leasing, should there be a media software application to access the information system that is able to provide accurate information.
