

ABSTRACT

Teknonogi have an important role in the quality of human resources. Agencies that require this technology is SMP PGRI Wangon experiencing difficulty in tracking students who have graduated and alumni SMP PGRI Wangon need a media to be able to share information of alumni, so it made an application communication among alumni.

Making the system is using some software, such as: windows 7 as the operating system, *Php* as a programming language and XAMPP as a Database Server.

This information system is solved by building a web-based application, this application uses the API Graf is the main way to get the data inside and outside the facebook platform. API (Application Programming Interface) based HTTP with a low level that you can use for querying the data, sending a new post, managing ads, upload photos and various types of other tasks to do application.

Based on the results of the testing of the system, it can be concluded that the information system displays the components of the articles on websites SMP PGRI Wangon and messages written by alumnus more effectively and at the time the article link or a message on the share will stick to fanspage facebook and alumni also get notifications facebook from facebook account alumnus.

Keywords: *Facebook Graph API, Posts, Facebook Fanpage*
