ABSTRACT

Jogja Web Center is a company engaged in making web services. Record-keeping and financial reporting in Jogja Web Center was recorded using Microsoft Excel, so that errors in recording financial transactions often occur, resulting in the presentation of financial statements that are not valid and duration of the financial reporting process. To minimize the error rate and the length of the process it developed a system that implements a system of financial statement information. With this system, it can help bag.akuntansi in record keeping and financial reporting.
