

## ABSTRACT

Web Systems internationalization (i18n - Internationalization) Case Study "Web Da'wah Islam" is a web system that is built to support the preaching of Islam in accordance guidance of the Qur'an and the Sunnah of the Messenger of Allaah 'Alaihi Wasallam where the website is featuring a da'wah content can anticipate users who can not read Arabic letters and features a web form that is standard Islamic articles displayed in Indonesian Arabic, Islamic event information, and question and answer session with the religious teachers.

At this writing has made the internationalization of web Islamic da'wah system design systems using Data Flow Diagrams (DFD) and System Flow Chart. This site was built using software that is sublime text in the PHP programming language and MySQL database and the browser used to run this web is Mozilla Firefox.

From the results of the implementation of the system, concluded that by using i18n (internationalization), the website Islamic da'wah can be utilized not only the Muslims in Indonesia alone but for the Muslims who are outside Indonesia and is expected to help the Muslims were unable to read the Arabic alphabet / hijaiyah , Website Islamic da'wah is supported by using CK Editor as a text editor that can handle hijaiyah letters which are then stored into a database and displayed, but it can not be directly entered via the keyboard, but must use the website both as input letters hijaiyah.
