

## **ABSTRACT**

*Nowadays, the development of technology and science are very rapid, particularly in the field of information technology. Website is very important for a company, because it can facilitate the company in recording the transactions precisely, since errors are often happen in the manual recording.*

*To overcome these problems, an inventory system is needed, so the errors that might happen can be minimized. This thesis entitled **A Web Based Inventory Information System in Vectorious Distro** used the FIFO method. The purpose of this research is to help the transaction recording in the company. This program can help the company to record the transactions digitally so the error can be minimized compared to manual transactions record. This digital recording can diminish the error so the loss can be diminish too.*

*Key words: FIFO, Inventory*
